

# MPAQ *Insight* Ready Mix Dispatch

# Star Ready Mix

- (1) The *Insight* Dispatch software runs under Windows Server-2012 Operating System. All dispatch data is centralized and available to all User Stations.
- (2) Windows 7/8/10 PC's can access the server and utilize the dispatch data. Additional user licenses can be added at any time.
- (3) After the *Insight* dispatch sends a ticket to a batch computer, it sends information to your GPS truck tracking system (such as delivery address, truck number). In return, data from your tracking system continuously updates your dispatch system's Truck Status screen and related reports. The *Insight* interfaces with tracking systems designed for ready mix operations, such as Trimble or Road King Technologies.
